SDEV2004 Software for Global Market 2
Continuous Assessment
Lab Class Week 5 – PART B

Today you will apply:

- Design Thinking (Empathise → Define → Ideate)
- Early Lean UX thinking (assumptions → hypotheses)
- Think (preparing for next week)
- To **your actual CA project.**

You are clarifying your thinking so that next week you can derive prototype guidelines that intentional and culturally grounded.

What You Should Leave With

- Two culturally grounded personas
- Clear PoV statements
- Strong HMW questions
- A small set of design hypotheses
- Clear assumptions that will inform your guidelines for the UI/UX design and development

Contents

PART 1 – EMPATHISE (THINK) 1

1.1 Target Context (Review from Week 3) 1

1.2 Two Contrasting Personas 1

Persona Hypothesis (Early Lean Thinking) 2

PART 2 – DEFINE (FOCUS THE DESIGN PROBLEM) 3

2.1 Write a PoV (Point of View) Statement for each Persona 3

PART 3 – IDEATE 3

3.1 Generate HMW Questions 3

3.2 Identify Emerging Design Tensions 4

PART 4 – EARLY DESIGN HYPOTHESES 4

4.1 Write some Hypotheses 4

NEXT WEEK 5

PART 1 – EMPATHISE (THINK)

1.1 Target Context (Review from Week 3)

Project Name:
Type of app (e.g., tourism app, e-commerce, banking, social platform, etc.):
Target Culture / Market:
Chosen Cultural Dimensions:

1.2 Two Contrasting Personas

You must design:

- Persona One → High on Dimension A / Low on Dimension B
- Persona Two → Opposite profile

Work out two personas which represent the different values on your chosen dimensions.

E.g. Persona One – High on dimension 1, low on dimension 2; Persona Two – Low on dimension 1 and high on dimension 2.

For each complete the following:

A. Cultural Influence

For each persona, explain:

- How does their cultural context affect:
  - Trust?
  - Authority?
  - Uncertainty?
  - Communication style?
  - Decision-making?

Keep this cultural — not generic.

B. Goals (List 4)

Persona One	Persona 2
1.	**1.**
2.	**2.**
3.	**3.**
4.	**4.**

C. Frustrations / Pain Points (List at least 3)

Persona One	Persona 2
1.	**1.**
2.	**2.**
3.	**3.**
4.	**4.**

D. Behaviour Patterns (How they actually behave)

Focus on:

- Autonomy vs guidance
- Speed vs detail
- Structure vs flexibility
- Social vs individual
- Risk tolerance

Write 4–6 behavioural traits:

Persona One	Persona 2
1.	**1.**
2.	**2.**
3.	**3.**
4.	**4.**

Persona Hypothesis (Early Lean Thinking)

You are not validating yet — you are clarifying assumptions.

Complete:

We believe there is a user type in [culture] who

They behave like _____
They struggle with _____

Do this for both personas.

PART 2 – DEFINE (FOCUS THE DESIGN PROBLEM)

2.1 Write a PoV (Point of View) Statement for each Persona

Template:

[User (descriptive)] needs [need (verb)] because [insight].

PoV – Persona One:

PoV – Persona Two:

Refine

Check that your PoV:

- Is about a human need
- Is culturally grounded
- Does not mention specific features
- Is not a technical solution

Rewrite if necessary.

PART 3 – IDEATE

3.1 Generate HMW Questions

Generate 6–8 total across both personas.

These should:

- Open design space
- Not specify a solution
- Be clearly linked to your PoVs

Persona One	Persona 2
1.	1.
2.	2.
3.	3.
4.	4.
5.	5.
6.	6.

3.2 Identify Emerging Design Tensions

Where do your personas conflict?

Examples:

- One wants structure; the other wants flexibility
- One wants authority cues; the other wants autonomy
- One values detail; the other values speed

Describe 2–3 tensions:

This is important — these tensions will inform next week's prototype guidelines.

PART 4 – EARLY DESIGN HYPOTHESES

You are identifying design beliefs that will shape your prototype.

4.1 Write some Hypotheses

Use simplified structure:

We believe that including [design approach]
For [persona]
Will help them [achieve need].

No measurable validation required yet.

Persona One	**Persona 2**
1.	**1.**
2.	**2.**
3.	**3.**
4.	**4.**
5.	**5.**
6.	**6.**

4.2 Identify Your Key Assumptions

List the assumptions underlying your hypotheses:

1.

2.

3.

Which one feels riskiest?

NEXT WEEK

Next week you will:

- Translate your hypotheses into **UI guidelines**
- Define:
  - Layout structure
  - Navigation style
  - Language tone
  - Use of imagery
  - Colour and control cues
- Justify each guideline culturally

END OF LAB

++
